

Why should I upgrade to the Electric Turning Point™ Bow?

The **Electric Turning Point™ Bow System** gets the bows out of the way in a single motion, swinging up and over loads without binding. The manual version does the same, but the electric version allows the operator to remain safely and comfortably in the cab while operating the system with a rocker switch or SMART-touch SMART2™ or SMART3™ remotes.

The electronic actuator is designed for long life in the harshest conditions. The **Electric Turning Point™ Bow System** operates safely in temperatures ranging from -85° to +140° F. A cut-off switch prevents it from operating unless the roll tarp is completely open.

In the event of actuator, wiring or switch failure, the system is easily converted to manual operation.

For additional information about Shur-Co® products, give us a call at **1.800.474.8756** Monday through Friday, from 8:00 a.m. to 5:00 p.m. Central Time. Our friendly and knowledgeable Customer Service Representatives will be happy to answer your questions. Or log on to our website at www.shurco.com.
